Erica Synths

- Company registered - October 2013
- Owners– Ģirts, Jānis, Raivo
- The first product launched – January 2014
- Over 150 different products (modules and standalone instruments) developed, produced and available
- Over B2C 5000 customers worldwide, over 40 retailers worldwide
- Team – 6
- Outsourced engineers – 2
- All products are made in Latvia
- No investors and bank loans
- Revenue 2017 – 1.8milj EUR

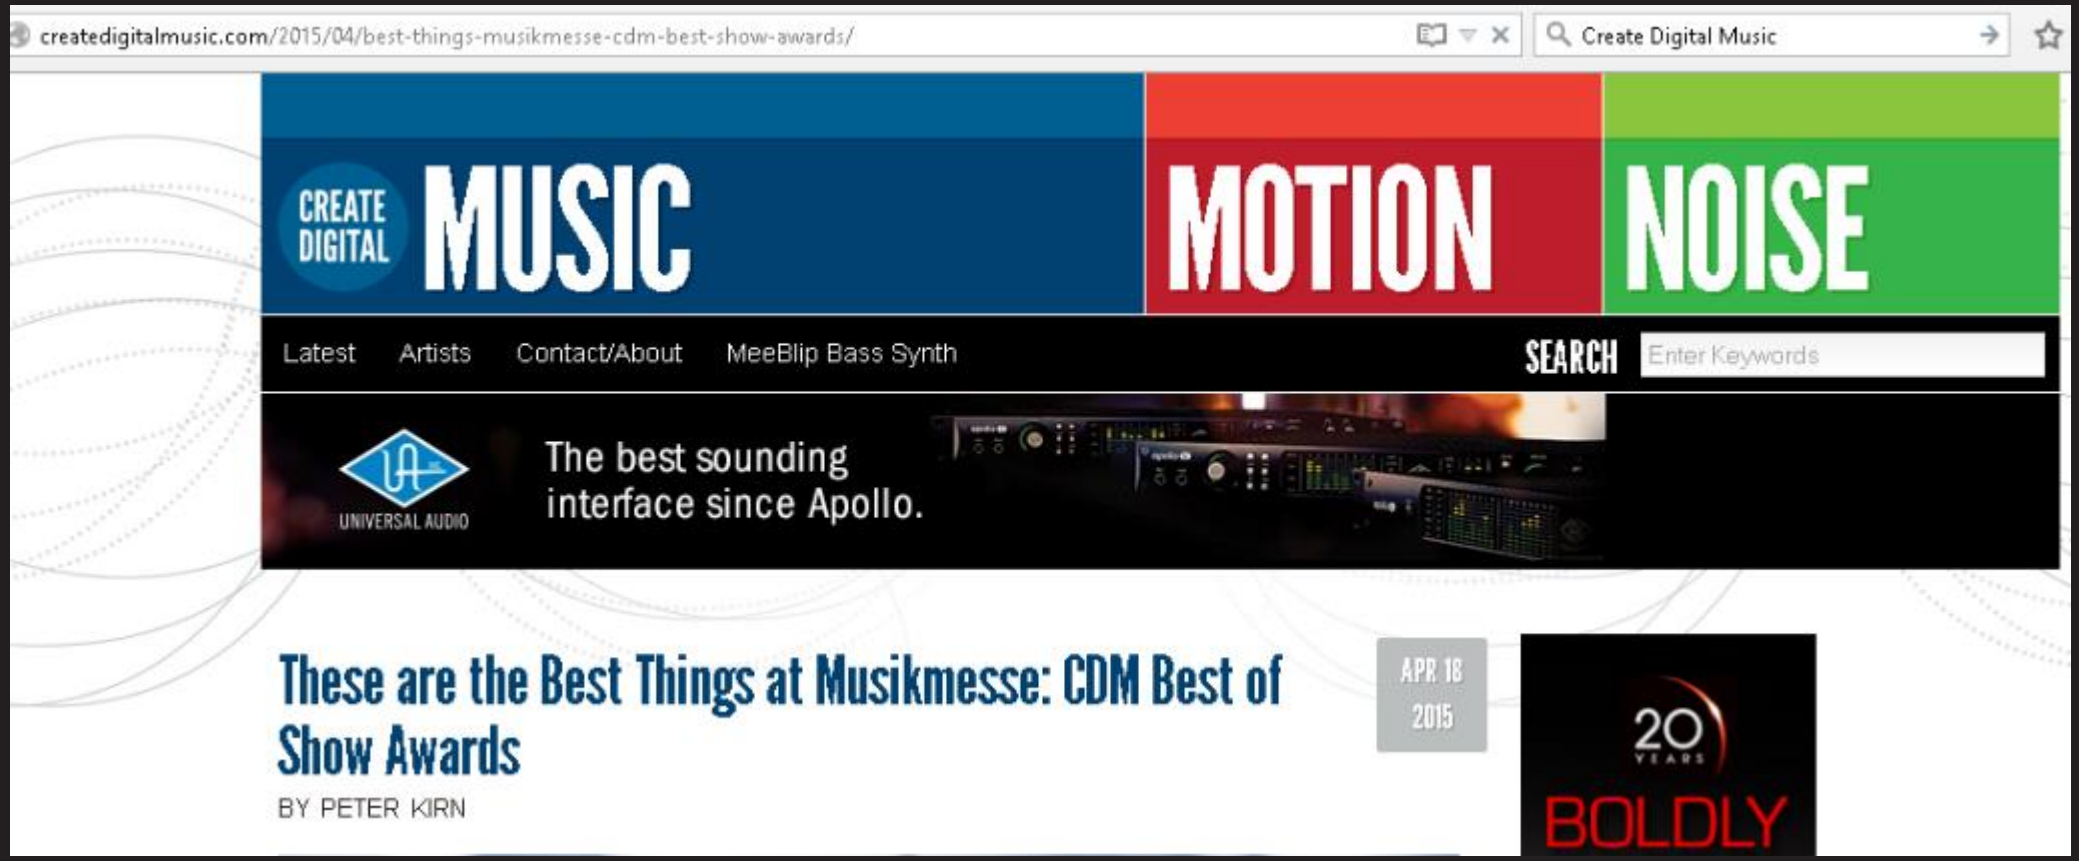
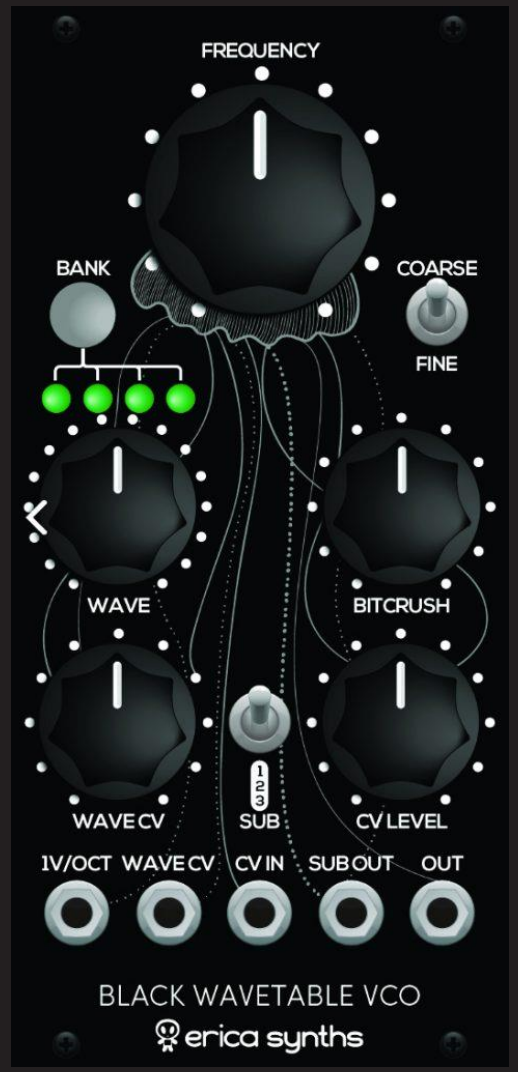
ERICA SYNTHS

HAVE STORIES TO TELL - JOURNALISTS



Erica Synths. I thought maybe the modular scene had made its big product announcements in January at NAMM. But then makers like 4ms managed to finish still more modules in time to demo prototypes or make announcements this week. The biggest news, though, came from Latvia's Erica Synths. Even more than Roland, Erica had a complete picture of how their synth line fits together, from DIY kits and weird sounds made from resurrected Soviet-era Polivoks tech to a fashionable "black" line of modules, graphical units, and a case. We'll have a video walk-through of everything with Erica captain Girts.

physical-computing Plug-ins previews recording retro Software synths trends upgrades USB videos Windows



MT Verdict

+ Absolutely outstanding build quality
+ 64 wavetables, straight out of the box
+ Smooth and sweepable wavetables
+ Nicely grouped wavetable sources
+ Plenty of CV control available
+ Sub and Bitcrush built in
+ It's got that wavetable sound

- No summed audio output

This is an outstanding module, packed full of great-sounding wavetables and with a great aesthetic styling and feel.

10/10

Erica Synths Black Wavetable VCO | €270 + VAT

Long-standing Latvian Eurorackers are making waves with their new VCO

Erica Synths are a perhaps lesser known Eurorack brand who have been releasing extremely solid, well thought-out and just plain interesting modules for several years now. They're maybe best known for their Polivoks range of both pre-built and DIY modules (you can build complete systems from their

we'll preface this by saying they're preaching to the converted here. A wavetable VCO is always a great complement to analogue VCOs, and with a good selection of basic waveforms onboard (as we do have here), may be all the oscillator you need, though many in Eurorack can be arguably a bit wild for that…

Indeed, wavetable VCOs are

more wavetables via three chip slots on the rear; two are pre-filled, one empty. These are accessible around the back, and of course you could potentially replace them all. Erica Synths say that a third chip should be available to buy separately later at a very reasonable 10 euros apiece, and they mention the possibility of a service allowing customers to

spot-on fullness and warmth that just completes the voice, so that the two outputs in combination made us note adjectives like 'classic, weighty and meaty' – which is not to say that other wavetable VCOs sound bad, but that this one really does sound very, very good. It's now one of the most affordable and compact wavetable VCOs in the format, with both digital modern wildness and synth tradition being well represented.

SPECS

Power: +48mA, -12mA, 12HP Wide, 25mm Deep

CONTACT

Who: Erica Synths

Web: http://www.ericasynths.lv

VERDICT

A smartly designed and classy wavetable machine with balls, that could easily be your *only* VCO, and sound damn good doing it.

VERDICT 8.9

SHARE!

Our Charity is the same as previous years The Drake Music Project who help disabled people to make music using some unique controllers.

"Drake Music removes disabling barriers to music through innovative approaches to teaching, learning and making music. Their focus is nurturing musical and creative ability through exploring music and technology in imaginative ways. They enable access to music making and connect disabled and non-disabled musicians locally, nationally and internationally."
Last year we raised over £600 for the charity, let's see if we can repeat that this year!

Darba ražīgums, jeb saprātīgais saspringšanas apjoms

Darba ražīgums ir darba efektivitātes rādītājs, kas rāda noteiktā laika periodā uz vienu strādājošo saražotās produkcijas daudzumu. Darba ražīgumu arī izsaka kā saražotās produkcijas attiecību pret izmantoto resursu daudzumu (piemēram, stundu skaitu).

polivoks VCF DIY
Hi Grits !
Here's Nicolas / RIPIT, we met at the BMF, the big beard guy
i'm building the VCF kit i bought you, and have a question regarding R4 and R5 that are labelled NU on the PCB... i assume it means "null" so should be a little bridge more than a resistance, am i right ?
also, the resistor labelled "option" are not required i guess...
let me know
best regards
N

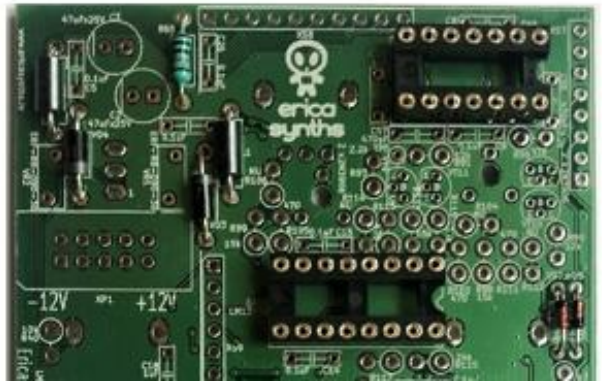
GUIDE TO ASSEMBLY OF ERICA SYNTHS DELAY MODULE

ASSEMBLY

Take precautions with regard to electrostatic discharge (ESD) safety. Handling components should be done in electrostatically safe environment. Use personal and workplace grounding. Any discharge (even a minor one) from body to a component may permanently damage it.
Our PCBs have silkscreened both component values and designators, but as resistors are mounted vertically, we highly recommend you to print out files with component placement before you start assembly of the module. And, please, at least take a look on this manual!

Some components are marked as NU (not used) – leave those unpopulated! Some components are market as OPTION (those are for optional modifications) – leave those unpopulated for now.

1 Solder horizontally placed resistors, diodes and ferrite beads! Pay attention on orientation of diodes! Also, solder IC sockets!



2 Solder ceramic capacitors!
